

AI-Native Blockchain Lithosphere Prepares LITHO Migration Path for BSC and Polygon Holders

The planned transition would allow eligible holders to access Lithosphere Mainnet once MultX is operational and verified migration procedures are released.

London, United Kingdom Oct 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - [Lithosphere](https://lithosphere.network), the AI-native Layer 1 blockchain developed by KaJ Labs, is preparing a migration pathway for eligible LITHO holders on BNB Smart Chain (BSC) and Polygon. The transition is planned for after MultX becomes operational and verified instructions are published. Migration is not yet available.

The effort follows Lithosphere's October 13 public mainnet launch and October 15 LITHO Token Generation Event. It is intended to connect existing holders on other networks with the native LITHO ecosystem without assuming that a mainnet launch automatically enables cross-chain transfers.

LITHO assets on BSC and Polygon operate in distinct technical environments from native LITHO. Any migration pathway must establish supported asset identities, eligibility, wallet compatibility, and secure movement between networks before holders can participate.

MultX is Lithosphere's cross-chain coordination infrastructure. The team expects to define the migration process, including authorized routes, participating wallets, and applicable conditions, once technical readiness is confirmed. No opening date or final migration terms have been provided.

Lithosphere advises holders to rely on official communications and avoid unverified migration links. No legitimate migration process should require users to disclose recovery phrases or private keys.

LITHO is intended for transaction fees, staking, validator participation, and governance-related functions on the native network. The migration initiative is distinct from exchange-market work, including Ignite DEX's ongoing efforts to continue LITHO trading through supported markets.

Further migration details will be communicated when MultX and the required procedures are ready. Until then, existing BSC and Polygon holders should wait for verified guidance before attempting a transfer.

About Lithosphere

Lithosphere is an AI-native Layer 1 blockchain ecosystem developed by KaJ Labs for Web4, autonomous agents, intelligent applications, and cross-chain digital infrastructure. Its technology stack is designed to support execution, identity, coordination, verification, wallet access, settlement, interoperability, and developer activity across connected decentralized systems.
