

As Financial Services Become More Accessible, AiderFi Launches Gold Rush to Make Community Support Part of Trading

Connecting users and traders through trading tools, with a community pool governed by clear participation and allocation rules to support eligible participants

Singapore, Singapore Oct 24, 2026 ([Issuewire.com](https://www.issuewire.com)) - *Connecting users and traders through trading tools, with a community pool governed by clear participation and allocation rules to support eligible participants*

As financial services become more accessible, opening an account and placing a trade have never been easier. Understanding strategies, choosing the right tools and keeping a clear head after a loss, however, still take experience and support. AiderFi today announced that Gold Rush will be the core product of its community trading ecosystem. It sets out to explore a specific question: when traders suffer losses and their available capital shrinks, can a community offer support that is rule-based and clearly defined?

Trading tools as the starting point for community participation

AiderFi was founded by traders, quantitative researchers and technology developers from Australia, Japan and Russia. The team's backgrounds span foreign exchange, crypto assets, futures and investment banking, and include experience building trading tools compatible with multiple exchanges.

The platform serves users at different stages through three independent products:

- **AI Signal:** trading signals and related parameters for users' reference.
- **Copy Trade:** helps users learn about traders or strategies and follow their trades using settings they choose.
- **Build Without Code:** helps traders who have a strategy but no programming background create automated trading tools.

These products serve newcomers looking for trading references, and give experienced traders tools to implement and share their strategies. Building on this, AiderFi aims to bring together more trading talent and invite members who wish to take part to join community collaboration through Gold Rush.

Why Gold Rush?

The impact of a loss often goes beyond a lower account balance. For traders with limited funds, shrinking capital can also bring pressure to win back losses quickly. Through Gold Rush, AiderFi aims to offer eligible participants a form of community support, while making eligibility, contribution requirements and the scope of support clear.

Under the program's design, users take part in designated Gold Rush semi-automated or fully automated strategies and contribute a portion of their trading profits to a community pool according to set rules. Participants who incur trading losses covered by the rules and meet the application criteria may apply for trading credit, to be used for subsequent trading as the rules permit. Eligible users may apply once per month. Whether an application is approved, and the amount granted, depend on the official rules and the funds available in the pool; the amount approved may be lower than the amount requested.

Using AI Signal, Copy Trade or Build Without Code alone does not automatically make a user eligible for Gold Rush.

A seed pool to support community building

According to AiderFi, the Gold Rush seed pool stands at US\$1 million, funded by AiderFi and already in place. The platform states that the pool's account is public and open to inspection. It is not currently held by a third-party custodian or audited; a publicly viewable account is not the same as independent verification of the funds. As community participation and profit contributions grow, the platform hopes to gradually expand the pool's size and capacity to provide support.

AiderFi has set a long-term goal of building the Gold Rush community pool to US\$10 billion. This figure is an aspiration, not the pool's current size, and is neither a forecast nor a commitment regarding future growth. In pursuit of this goal, the platform plans to keep refining its strategy evaluation, risk management, pool allocation and user service rules. How much support the pool can provide will depend on the funds actually available, participation criteria and allocation arrangements.

Community support needs clear rules

Gold Rush trading credit is support provided under set rules. It reflects mutual support and capital empowerment within the ecosystem, and is not cash compensation. The availability and scope of trading credit depend on the funds available in the pool, the application criteria and the allocation rules, and do not constitute a promise to fully offset losses or to provide ongoing support.

AiderFi's long-term aim is to help more traders gain access to tools, experience and community support,

pursue long-term growth with a clear understanding of risk, and build stronger risk awareness and trading discipline.

"Making it easier for newcomers to get started, so you never have to trade alone." This brand promise is also where Gold Rush begins.

Risk warning: Trading involves risk and may result in losses. Gold Rush does not guarantee profits. Community trading support is not capital protection or loss compensation. Specific eligibility, application criteria, credit amounts, scope of use and settlement arrangements are subject to the official terms.

About AiderFi

AiderFi is a community trading system founded by traders and technology developers. Through AI Signal, Copy Trade and Build Without Code, the platform serves traders at different stages, with Gold Rush at its core as a mechanism for community participation and conditional trading support.
