Code Secure Academy Unveils Four Core Tracks, Integrated Marketplace, and ₦5,000 Founding Cohort Rate

A project first tech education ecosystem designed to help learners build real software, defend digital systems, and ship portfolio ready work.

Owerri, Imo Oct 11, 2026 (Issuewire.com**)** - **OWERRI, NIGERIA:** Code Secure Academy, an initiative under Code Secure Enterprise, has officially launched its cohort-based training platform, introducing four core tracks, an integrated marketplace, and a flat ₦5,000 enrollment rate for its Founding Member Cohort open through November 30, 2026.

Built to address the gap between watching video tutorials and shipping production-ready work, Code Secure Academy operates an 8-week, project-first model where learners work alongside peers on real-world briefs.

The Four Core Tracks

Code Secure Academy offers specialized hands-on training across four technical disciplines:

1. **Frontend Development:** Master fast, accessible user interface engineering using HTML, CSS, JavaScript, and React, ending with a live, portfolio ready web application.

2. **Cybersecurity:** Hands on defensive security engineering, OWASP Top 10 vulnerability assessment, network security, and practical lab exercises to teach learners how to think like attackers and defend like professionals.

3. **Backend Development:** Build production APIs, databases, authentication systems, and cloud backend architecture using tools like Python, Django, and PostgreSQL.

4. **Graphic Design:** Master brand identity systems, layout architecture, and visual design using industry tools like Figma, Canva, and Adobe Photoshop through real client-style project briefs.

Ecosystem, Marketplace, and Tuition

Each track is offered at a flat tuition rate of **₦5,000 per track** with no hidden fees, providing full project based curriculum access, dashboard materials, and cohort support.

Beyond cohort training, the ecosystem features free browser based coding tutorials across 15+ languages and an integrated marketplace where students and approved sellers can offer digital products and tech assets.

"Code Secure Academy exists to turn beginners into builders who ship real projects and think about security by default," said Victory Ugochukwu Emmanuel, Founder & Academy Director. "We do not sell video libraries; we sell seats in active cohorts that finish real, working software."

About Code Secure Academy

Code Secure Academy, an initiative under Code Secure Enterprise, is a cohort-based tech training platform and ecosystem based in Owerri, Nigeria, focused on practical software development, cybersecurity, and visual design.
