

Decentralized Exchange Ignite on Lithosphere Blockchain Works to Continue LITHO Trading

Ignite is focusing its market and liquidity efforts on keeping LITHO trading available as the Lithosphere ecosystem moves beyond its mainnet launch and TGE.

Singapore, Singapore Oct 26, 2026 (Issuewire.com) - [Ignite DEX](#), the decentralized exchange within the Lithosphere blockchain ecosystem, is working to continue trading on Ignite, with LITHO coin markets a central priority. The platform is directing its efforts toward market access, liquidity coordination, wallet connectivity and technical readiness to support trading as the network enters its post-launch phase.

[Lithosphere](#) launched its public mainnet on October 13, followed by the LITHO Token Generation Event on October 15, 2026. With those milestones complete, the priority for Ignite is to help users continue trading LITHO on its decentralized platform, rather than treating initial token distribution as the final stage of market development.

Ignite is focusing on the practical requirements for trading to continue, including supported market availability, accessible liquidity and dependable interaction between wallets and the exchange. These elements matter for users seeking to place transactions and follow LITHO market activity after the TGE. Trading availability and execution depend on the technical and liquidity conditions of each supported market.

The effort to continue trading goes beyond keeping a trading interface accessible. Ignite is prioritizing operational coordination and clear market information so that participants can understand which

markets and features are available. The platform is also focused on addressing factors that could limit trading access, while recognizing that trading activity, execution and liquidity cannot be guaranteed at all times.

LITHO is the native coin of the Lithosphere Layer 1 blockchain, with intended uses across transaction fees, staking, validator participation and governance-related functions. Ignite serves a different but complementary purpose by working to provide decentralized market access for LITHO holders. Its commitment is to continue supporting a practical trading environment, not to promise prices, liquidity levels or financial returns.

Beyond LITHO, Ignite is assessing opportunities for verified assets and additional communities to participate in its decentralized markets. Any new pair or network route would depend on asset verification, technical compatibility, secure routing where applicable and sufficient liquidity. These possible additions do not change the immediate priority of working to continue trading on Ignite for existing users.

As the Lithosphere ecosystem expands after mainnet and TGE, Ignite will keep efforts to continue LITHO trading at the center of its market operations. Confirmed changes to supported markets or trading functions will be communicated through official channels as technical and liquidity conditions develop.

About Ignite DEX

Ignite DEX is a decentralized trading platform in the Lithosphere ecosystem focused on wallet-connected digital asset markets and decentralized liquidity access. The platform is working to continue trading availability for eligible participants through supported markets and compatible infrastructure.

About Lithosphere

Lithosphere is an AI-native Layer 1 blockchain ecosystem developed by KaJ Labs for Web4, autonomous agents, intelligent applications and cross-chain digital infrastructure. Its technology stack is designed to support execution, identity, coordination, verification, wallet access, settlement, interoperability and developer activity across connected decentralized systems.
