

Grand Mirrors Introduces STUDIO MirrorArt and LightWall, Expanding Creative Possibilities in Architectural Glass Design

Newport Beach, California Oct 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - Grand Mirrors, Evervue's premium custom mirror brand, introduces Grand Mirrors STUDIO, featuring two distinctive architectural design solutions: [STUDIO MirrorArt](#) and [STUDIO LightWall](#). Combining advanced UV printing technology, precision glass manufacturing, and customizable designs, the collection offers architects, interior designers, and property developers new opportunities to integrate artistic expression into residential and commercial environments. Through STUDIO, Grand Mirrors expands beyond conventional mirror applications, transforming reflective and illuminated glass surfaces into architectural features that complement a space's design identity.

The collection brings together two complementary concepts: MirrorArt, which integrates custom artwork into mirror surfaces, and LightWall, which transforms printed glass into illuminated architectural installations.

STUDIO MirrorArt: Transforming Mirrors Into Architectural Artwork

STUDIO MirrorArt reimagines the traditional mirror as a personalized design element, combining reflective functionality with artistic expression. Using advanced UV printing technology, MirrorArt integrates custom patterns, graphics, textures, and artwork directly onto mirror surfaces, creating visually distinctive designs without relying on conventional decorative films or decals. The technology enables precise color reproduction, smooth gradients, and layered visual effects, allowing designers to create sophisticated details that complement surrounding materials and architectural finishes.

Unlike mass-produced decorative mirrors, MirrorArt pieces can be manufactured according to individual project specifications. Available in large single-piece formats up to approximately 6 × 9 feet, MirrorArt accommodates applications ranging from custom bathroom vanities and residential statement pieces to hotel interiors, restaurants, and commercial spaces. Designs can also incorporate Grand Mirrors' signature LED lighting, introducing an additional visual dimension while maintaining the mirror's intended aesthetic.

STUDIO LightWall: Bringing Custom Artwork to Illuminated Glass

Complementing MirrorArt, STUDIO LightWall extends Grand Mirrors' glass manufacturing and LED lighting expertise into architectural wall features and decorative installations. LightWall transforms custom-printed glass into illuminated surfaces, allowing artwork, patterns, textures, and branded graphics to become integrated elements of an interior environment. Through UV printing, designers can explore customized visual concepts beyond conventional wall finishes, including stone-inspired patterns, abstract compositions, and architectural graphics.

The illumination adds depth and visual presence, making LightWall suitable for reception areas, hospitality interiors, retail showrooms, restaurants, feature walls, glass partitions, and decorative counters. LightWall offers various glass configurations, including tempered and laminated options, with flexibility for curved architectural applications. Available in single-panel formats up to approximately 6 × 9 feet, the system also incorporates specialized aluminum mounting solutions designed to support large-scale installations.

Customization at the Center of Every Project

A defining feature of Grand Mirrors STUDIO is its made-to-order manufacturing approach. Rather than relying on standardized decorative patterns, MirrorArt and LightWall are developed around each project's individual design vision, dimensions, and installation requirements. Clients can submit artwork, architectural concepts, and technical specifications, which are reviewed through a design approval process before manufacturing.

This approach encourages collaboration among architects, interior designers, builders, hospitality developers, and property owners seeking solutions tailored to their environments. From residential statement pieces to large commercial installations, STUDIO accommodates diverse design requirements while maintaining an emphasis on precision manufacturing, material quality, and creative flexibility.

Expanding the Role of Glass in Modern Interiors

With STUDIO MirrorArt and LightWall, Grand Mirrors continues exploring the relationship between art, technology, and architectural functionality. The collection reflects an evolving approach to interior design in which mirrors and glass surfaces serve not only practical purposes but also contribute to a space's visual identity, atmosphere, and overall architectural character.

By combining advanced printing technology, integrated illumination, and custom fabrication, Grand Mirrors STUDIO offers designers greater flexibility to create distinctive interior environments. The collection reinforces the brand's commitment to developing innovative, customizable solutions that unite aesthetic possibilities with practical architectural applications.

About Grand Mirrors

[Grand Mirrors](#) is Evervue's premium brand specializing in custom-made illuminated mirrors and architectural glass solutions for residential, hospitality, commercial, and architectural applications worldwide. Combining advanced LED technology, precision manufacturing, and extensive customization capabilities, Grand Mirrors works with homeowners, architects, interior designers, builders, and hospitality professionals to create solutions tailored to individual project requirements.
