

Ignite DEX on Lithosphere Proposes \$300 Million Liquidity Incentive Program for Former Harmony ONE DeFi Users

The proposed, approval-dependent framework would support qualified Harmony ONE-linked liquidity providers and applications considering verified markets on Lithosphere.

Seattle, Washington Oct 15, 2026 ([Issuewire.com](https://www.issuewire.com)) - [Ignite DEX](#), part of the Lithosphere ecosystem, has outlined a proposed liquidity incentive program of up to US\$300 million aimed at qualified participants with experience in Harmony ONE-based decentralized finance. The framework is intended to provide a potential route for liquidity providers, projects, and users exploring additional markets on Lithosphere. The figure is a proposed maximum program envelope, not funding already approved, deposited, or made available to participants.

Under the proposal, incentives would be considered for eligible liquidity providers supporting verified markets on Ignite DEX. Any program launch would depend on treasury approval, applicable governance and legal review, technical readiness, and published operating rules. No specific pool, project, user, or asset is guaranteed an allocation, listing, or incentive.

The proposal is designed around continuity of participation rather than requiring Harmony ONE users to abandon existing positions. Interested projects and liquidity providers could be assessed for supported asset provenance, smart contract integrity, safe cross-chain routing where applicable, and sufficient market depth. Harmony ONE-linked assets would not become tradable on Ignite merely by being named as potential candidates.

Potential incentive mechanisms include time-limited fee rebates and liquidity-provider rewards with

predefined caps, transparent eligibility standards, and controls against artificial trading volume or self-dealing. The final program, if authorized, would need to specify approved markets, reward calculations, treasury limits, claim schedules, and conditions for pausing or ending incentives.

The proposed initiative follows Lithosphere's October 13 public mainnet activation, which moved the AI-native Layer 1 network into production operation. Ignite DEX is being developed as a decentralized market access layer for the broader ecosystem, with an emphasis on connecting markets and applications through infrastructure that can support cross-chain activity. Any Harmony ONE-related routes or markets would remain subject to separate technical validation and liquidity requirements.

A central consideration is the difference between opening a new trading opportunity and resolving historical asset losses or liquidity constraints. This proposal does not constitute an asset recovery, reimbursement, or redemption program. Cross-chain assets and liquidity positions can carry bridge, smart contract, slippage, custody, and market risks, and participation would not guarantee returns or preservation of capital.

If the initiative proceeds, Ignite would publish an application process and market-specific requirements before accepting eligible providers into any incentive phase. The objective is to evaluate whether transparent, risk-controlled incentives could help build sustainable liquidity and practical market access for communities seeking additional DeFi options across networks.

About Ignite DEX

Ignite DEX is a decentralized trading platform within the Lithosphere ecosystem, developed to support market access and trading infrastructure across connected blockchain environments.

About Lithosphere

Lithosphere is an AI-native Layer 1 blockchain ecosystem developed by KaJ Labs for Web4, autonomous agents, intelligent applications, and cross-chain digital infrastructure. Its technology stack is designed to support execution, identity, coordination, verification, wallet access, settlement, interoperability, and developer activity across connected decentralized systems.
