

Ignite Extends Cross-Chain Trading Infrastructure for XRP and Assets Transitioning From Sunset Networks

The decentralized market platform strengthens cross-chain trading and liquidity infrastructure to support XRP and digital assets seeking new market pathways as blockchain networks evolve.

Singapore, Singapore Oct 7, 2026 ([Issuewire.com](https://www.issuewire.com)) - [Ignite](#) is extending its cross-chain trading infrastructure to support XRP and digital assets transitioning from sunset networks, strengthening market pathways for communities navigating changes across the blockchain landscape. The development advances Ignite's focus on decentralized trading, liquidity access, and multi-chain market connectivity.

As blockchain networks evolve, projects and asset communities can face challenges when underlying networks discontinue operations or reduce long-term support. Ignite's cross-chain framework is designed to provide adaptable market infrastructure for supported assets seeking continued access to decentralized trading environments across active blockchain ecosystems.

The platform's approach connects trading infrastructure with cross-chain liquidity pathways, reducing dependence on isolated market environments. For XRP and other supported assets, this creates a foundation for broader participation across decentralized markets while enabling users to interact through connected blockchain environments.

Ignite's development also aligns with emerging Web4 activity, where users, decentralized applications, and autonomous systems may require market access spanning multiple networks. Strengthening cross-

chain infrastructure provides a more flexible foundation for digital assets and communities operating within this increasingly interconnected environment.

[J. King Kasr](#), Chief Scientist at KaJ Labs, noted that changing network conditions highlight the need for adaptable market infrastructure across the blockchain ecosystem. According to Kasr, cross-chain trading pathways can help supported assets and communities maintain access to decentralized markets as underlying networks and digital ecosystems continue to evolve.

About Ignite

Ignite is a decentralized market platform focused on providing digital asset trading, liquidity access, and cross-chain market infrastructure for blockchain ecosystems and emerging Web4 applications.
