

Institutional Adoption Continues to Grow as FLYNIT Explores New Opportunities in Global Digital Asset Infrastructure

Ansonia, Connecticut Oct 22, 2026 ([Issuewire.com](https://www.issuewire.com)) - As traditional financial institutions continue to explore digital asset custody, on-chain settlement, and tokenized asset services, global digital finance infrastructure is entering a new phase of development. Competition across the industry is increasingly extending beyond basic trading functionality to encompass technology capabilities, asset security, risk management, and professional service infrastructure.

In October 2026, Deutsche Bank's plans to advance digital asset custody services attracted market attention. Meanwhile, State Street's 2026 digital asset research indicated that 51% of surveyed institutional investors expect digital assets to become a mainstream asset class within the next five years. These developments reflect the industry's ongoing efforts to establish deeper connections between digital assets and traditional financial systems.

Against this backdrop, FLYNIT Global Digital Asset Exchange Inc. is developing FLYNIT as a global digital asset trading and financial technology service platform. According to its whitepaper, the platform plans to expand its integrated service ecosystem across spot trading, professional market data, digital asset management, intelligent strategy assistance, API connectivity, and institutional-grade services.

For digital asset trading platforms, growing institutional participation brings not only changing service requirements but also higher expectations for system stability, operational standards, data quality, and security management. FLYNIT plans to strengthen its technological capabilities through a modular and distributed architecture, a high-performance matching system, and multi-layered security mechanisms,

with a focus on improving platform resilience and risk management.

As part of its global development strategy, FLYNIT also plans to expand multilingual services, regional operations, and ecosystem partnerships, while exploring opportunities at the intersection of digital asset trading infrastructure and global financial technology services. The platform will continue developing its compliance framework in accordance with applicable laws and the scope of its actual business activities, conducting relevant operations only where the necessary registrations, licenses, or authorizations have been obtained.

As digital financial infrastructure continues to evolve, FLYNIT remains focused on technology development, security management, compliant operations, and long-term growth, with the aim of gradually expanding its global service capabilities.

FLYNIT — Connecting Global Assets, Powering the Digital Future.
