

Intelligence Agency The Brooks Brief Alleges Government Misconduct

The Brooks Brief urges independent review, preservation of relevant records, congressional oversight, and accountability for any substantiated wrongdoing.

Compton, California Oct 26, 2026 ([Issuewire.com](https://www.issuewire.com)) - The Brooks Brief (TBB), a subsidiary of MtB Entertainment, is conducting an independent and impartial investigation into allegations raised by Marcus Todd Brooks concerning possible federal government misconduct, surveillance, interference with personal and business activities, and the potential concealment of material facts. More at: [The Brooks Brief \(Current Investigation\)](#)

The allegations include reported attempted assassinations involving individuals Mr. Brooks believes may have been associated with a possible unauthorized surveillance team or recording by unknown people around him; alleged interference in his personal relationships; concerns about the possible unauthorized collection or use of his DNA, falsifying DNA test results, and reproductive information; and claims that his music performance data and website traffic may have been manipulated by YouTube.

These statements represent allegations and concerns requiring independent assessment. They are not presented as established findings of fact. TBB has not publicly verified the alleged

attempted assassination, the identity or affiliation of any individuals involved, the alleged unauthorized use of genetic material, or the claimed manipulation of digital analytics. No conclusion regarding criminal liability should be drawn without credible evidence and appropriate investigation.

Allegations Requiring Independent Review¹. Alleged attempted assassination and potential abuse of federal authority

Mr. Brooks alleges that, in February 2026, individuals he believes were associated with an organization may have attempted to assassinate him and were unsuccessful. This is a serious allegation. TBB calls for any available evidence concerning the reported incident to be examined by an independent investigative authority with appropriate jurisdiction, including a review of relevant records, witness accounts, and any available forensic evidence.

At this stage, TBB does not represent that the identities, affiliations, motives, or actions of the individuals allegedly involved have been established. The purpose of an investigation should be to determine what occurred, whether any official participated, and whether any law or constitutional protection was violated.

2. Alleged surveillance, recording, and interference in personal relationships

Mr. Brooks has expressed concerns that people in his surroundings may have been recording or monitoring him and that individuals may have attempted to influence his personal relationships in ways he perceived as contrary to his interests. He has also raised concerns about possible sexual or intimate relationships being used to influence, embarrass, or otherwise disadvantage him. Mr. Brooks maintains he has not had sexual relations since 2017, and his HIV test from 2021 was negative (non-reactive). All blood test have not tested positive for any STI.

[Negative HIV Test](#)

These concerns require evidence-based assessment before any connection to federal officials or agencies can responsibly be asserted. TBB encourages the preservation and careful examination of any relevant communications, recordings, firsthand witness accounts, or other independently verifiable material.

3. Concerns regarding genetic material, reproductive autonomy, and HIV-related claims

Mr. Brooks alleges that the government may have obtained or used his DNA without his consent for reproductive purposes. He also raises concerns about uncertainty surrounding another person's possible HIV status, their blood donation, and whether transmission may have occurred.

Possible Children From DNA Unauthorized Collections

[Child One](#)

[Child Two](#)

[Child Three](#)

These matters have not been independently verified, and TBB makes no finding that genetic material was taken, that reproduction occurred, that anyone has HIV, or that any infection was transmitted. Any

investigation into the alleged collection or use of genetic material should establish whether a sample was obtained, how it was handled, whether consent was given, and whether reliable documentation supports the allegation.

Questions concerning HIV status or transmission should be addressed through reliable medical evidence and appropriate privacy protections, not rumor or speculation. No individual's health status should be treated as established without credible evidence.

4. Alleged interference with music, website traffic, and business interests

Mr. Brooks further alleges that the performance data associated with his music and the view counts or traffic associated with his website may have been altered or manipulated by government actors.

TBB calls for a technical, evidence-based review of relevant platform analytics, access logs, account records, and other available digital evidence where lawfully obtainable. Such a review should distinguish ordinary platform adjustments, technical errors, automated traffic filtering, and other explanations from any demonstrable unauthorized interference.

TBB considers transparency and fair treatment of independent creators and businesses matters of public interest. However, the cause of any discrepancy in digital metrics should not be attributed to a government agency without corroborating evidence. This can affect the entire music industry if streams are not accurately recorded.

Potential Legal and Constitutional Issues

If substantiated, conduct involving attempted violence, unlawful surveillance, unauthorized acquisition or use of genetic material, fraud, theft, obstruction, or abuse of public office could warrant criminal, civil, administrative, or constitutional scrutiny, depending on the facts and applicable law.

The term **treason** has a specific and narrow meaning under the United States Constitution and federal law. TBB is not declaring that treason has occurred, but it is possible. Any potential criminal offense must be assessed by competent authorities against the applicable legal elements and admissible evidence.

Similarly, allegations involving assault, sexual abuse, fraud, theft, or concealment must be investigated individually. The existence of concerns or suspicions, by itself, does not establish that a crime occurred or identify who may be responsible.

Public Accountability and Financial Transparency

Mr. Brooks has also raised broader concerns about federal finances, including a figure he characterizes as approximately **negative \$40 trillion in government debt**, and has cited an estimated **\$700 quintillion value for an asteroid** as part of his argument about resources, ownership, and public accountability.

[American Debt](#)

[\\$700 Quintillion Asteriod](#)

These figures require separate clarification. Federal debt figures must be evaluated against official fiscal

records and clearly defined accounting measures. The estimated value of an asteroid is speculative unless supported by a defensible valuation method, and a theoretical resource valuation does not establish government ownership or the existence of funds available for public use. TBB presents these matters as part of the broader questions Mr. Brooks has raised, not as independently verified financial findings.

TBB's Requested Actions

The Brooks Brief calls for the following measures, where supported by credible evidence and pursued through the appropriate legal channels:

- **Independent investigation:** Referral of substantiated evidence concerning the alleged February 2026 incident and other potentially unlawful conduct to an independent authority with jurisdiction and appropriate safeguards against conflicts of interest.
- **Preservation of evidence:** Preservation of relevant records, communications, access logs, forensic material, and other evidence, subject to applicable law and legitimate privacy protections.
- **Congressional and inspector general oversight:** Review by appropriate congressional oversight bodies and relevant inspectors general if evidence provides a reasonable basis to examine possible misconduct by federal personnel or agencies.
- **Law-enforcement referral:** Referral of credible evidence of potentially criminal conduct to the appropriate investigative or prosecutorial authorities for independent assessment.
- **Disclosure and records access:** Lawful requests for relevant government records, including through applicable federal records-access procedures, while recognizing lawful exemptions and restrictions.
- **Protection of rights and privacy:** Appropriate safeguards for personal information, genetic material, medical privacy, digital accounts, and other legally protected interests.
- **Accountability where warranted:** Corrective action, disciplinary measures, civil remedies, or criminal prosecution where the evidence and applicable law justify them, with due process for all parties.

Statement From The Brooks Brief

“The seriousness of these allegations demands neither automatic acceptance nor automatic dismissal. It demands a fair, independent, evidence-based examination. No public office or government agency should be beyond lawful scrutiny, and no individual should be declared guilty without evidence and due process like Mr. Brooks. The Brooks Brief calls for relevant evidence to be preserved, credible claims to be investigated by authorities capable of acting independently, and any substantiated misconduct to be addressed through lawful channels.”

About The Brooks Brief

The Brooks Brief (TBB), a subsidiary of MtB Entertainment, publishes commentary and material concerning political science, law, history, culture, public institutions, and matters of public accountability. TBB supports transparent public discussion and the responsible examination of allegations involving the exercise of governmental power.
