

Mango AI Brings AI Video Face Swap to Short Clips

Mango AI's AI video face swap tool replaces one visible face in short footage while retaining natural-looking expressions.

Hong Kong, Hong Kong S.A.R. Oct 24, 2026 ([Issuewire.com](https://www.issuewire.com)) - Mango AI has released its [AI video face swap](#) tool for creators who want to replace one visible face in short video footage. The online tool keeps the source clip's movement and timing while producing natural-looking facial expressions in the changed result.

Face replacement in motion can support entertainment, social posts, character concepts, parody, themed messages, and other disclosed creative edits. Because the surrounding scene remains part of the original footage, creators can change who appears without rebuilding the performance, camera work, or background.

The AI video face swap tool works with a source clip containing one face and a separate target portrait. A clear front-facing face and good lighting provide the strongest source material. The tool also accepts cartoon and animal subjects, extending the effect beyond conventional portrait footage while keeping the same single-face format.

Mango AI positions the AI video face swap as a focused short-form effect rather than a general video editor. It gives creators a downloadable result built around the original clip, allowing the movement and setting to remain recognizable throughout the change.

Projects involving several people can use multiple face swap video tool, while photo face swap serves still images. The Talking Photo tool addresses portrait-led speech instead of face replacement.

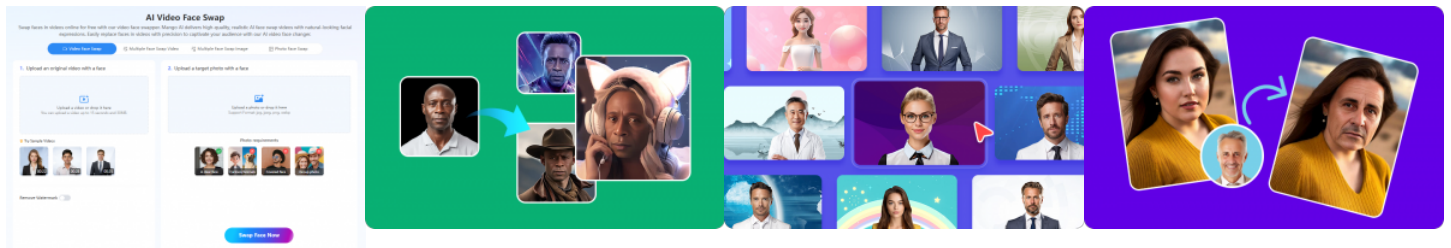

Responsible use remains important when an AI video face swap includes a recognizable person. Creators should have permission to use the source footage and target portrait, and synthetic changes should be disclosed when viewers could mistake the result for a genuine appearance or endorsement.

"Short video effects are most useful when the result remains clear and consistent from beginning to end," said Ken Glenn, CMO of Mango Animate. "Our AI video face swap tool gives creators a direct way to reshape a permitted clip while preserving the movement already present in the footage."
