

Online Art Gallery Platform ExhVerse Helps Artists Share Complete Collections

Artists can use ExhVerse to create an online art gallery that brings related works into a dedicated 3D presentation, giving audiences a place to explore the collection behind an individual image.

Hong Kong, Hong Kong S.A.R. Oct 26, 2026 ([Issuewire.com](https://www.issuewire.com)) - A social post can introduce one artwork. ExhVerse gives artists a place to show the collection around it. Through its [online art gallery](#) tools, creators can prepare a browser-based exhibition of related works and share the link with people who want to see more.

For an artist releasing a new series, individual posts and a gallery can serve different purposes. A post introduces a particular piece, while the exhibition brings the selected works together under a collection title. Viewers can move from the image that first interested them to other pieces in the same project, without having to locate each one among earlier updates.

ExhVerse supports this approach with pre-designed 3D gallery environments. Artists choose a template, upload prepared artwork images, and add exhibition and artwork information. The ready-made space provides a setting for the collection without requiring the creator to build a 3D website from scratch.

A painter sharing one watercolor from a recent series, for example, could include the exhibition link in an accompanying email or a social profile that supports links. Someone interested in that painting could open the gallery and look through the other works. The artist prepares the exhibition and shares its link through their own channels, choosing which collection to introduce.

"Someone who discovers an artist through one image should have somewhere to go when they want to see more," said Winston Zhang, CEO of ExhVerse. "An online art gallery gives artists a way to present the collection around that first encounter, with the works and information they choose to share."

The accompanying text helps introduce the work to visitors who may know little about the artist. A brief exhibition description can explain what the collection contains, while individual artwork descriptions can identify materials or provide a short note about a piece. This information stays with the presentation, so visitors arriving from different posts or emails have access to the same background.

The exhibition can also give an artist's communications a consistent destination. Several posts featuring different works from one series can point to the same collection. A newsletter announcing the series can use that link too. Each message offers its own introduction, while the gallery holds the selected body of work for visitors to explore.

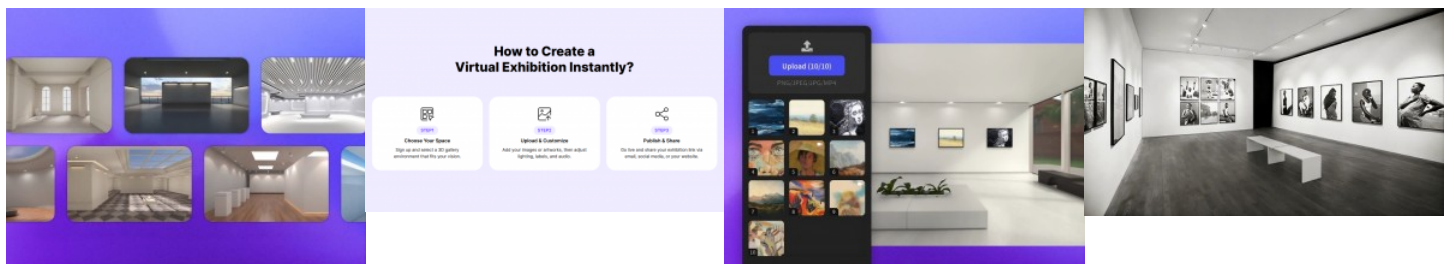

Published galleries open in a browser on a computer, tablet, or smartphone, with no separate app required. Visitors can navigate the exhibition and read the descriptions at their own pace. The artist's existing website and social accounts remain places to announce the work; the gallery provides the exhibition those announcements lead to.

ExhVerse offers a free version supporting up to three exhibitions with 30 works per exhibition and access to free templates. Artists can begin with a compact collection and decide whether they need the greater capacity or additional presentation options available through Pro plans.

Artists preparing a new collection can explore [ExhVerse](#)'s online art gallery platform to give interested viewers a next step after discovering an individual work.

About ExhVerse

ExhVerse is a browser-based 3D gallery and virtual exhibition platform powered by FlipHTML5. It provides ready-made exhibition environments and tools for presenting artwork images and written information online. Free and Pro plans are available.
