

OTPIQ Simplifies Secure Verification for Businesses Across MENA

One API for SMS, WhatsApp and Telegram OTP delivery, with smart fallback routing, delivery receipts and local-currency pricing.

International SMS Now Available at OTPIQ

otpiq.com

Caerphilly, Wales Oct 3, 2026 ([Issuewire.com](https://www.Issuewire.com)) - OTPIQ LTD, a verification platform built for MENA region, today highlighted the everyday challenges businesses face when sending one-time passwords (OTPs), and how its single API is designed to solve them.

For fintech apps, online stores, delivery services, health platforms and schools, a verification code that arrives late or never arrives means a lost sign-up, an abandoned checkout or a frustrated customer. Many teams also struggle with unpredictable delivery across local mobile networks, little visibility into whether a message was actually received, rising messaging costs, and long integration times.

OTPIQ addresses these problems with one API that sends OTPs over SMS, WhatsApp and Telegram. Its smart routing automatically falls back to another channel when a message isn't delivered, so users get their code without developers building and maintaining separate integrations for each channel.

Key capabilities include:

- Multi-channel delivery: SMS (including custom Sender ID), WhatsApp and Telegram from a single integration.
- Smart auto-fallback: automatic switching between channels to keep delivery rates high.
- Delivery receipts and webhooks: real-time reporting so teams know the status of every message.
- Region-optimized routing: built for Iraq and Kurdistan, with compliance-aware routing across local

networks.

- Transparent pricing: per-message billing in Iraqi dinars, with intelligent routing that OTPIQ says can reduce costs by up to 70%.
- Fast onboarding: OTPIQ says developers can send their first OTP in about five minutes.

OTPIQ reports a 99.99% delivery success rate and serves businesses across sectors including fintech, e-commerce, logistics, health and education.

About OTPIQ

OTPIQ is an SMS, WhatsApp and Telegram verification platform for businesses in Iraq and the Kurdistan Region. It gives developers one API for OTP delivery, delivery receipts and compliance-aware routing. Learn more at <https://otpiq.com>.
