

SelfyzAI Completes First-Batch Internal Testing of Kling 4.0; Model to Join Workspace Picker at Public Launch

Canton, New York Oct 10, 2026 ([Issuewire.com](https://www.issuewire.com)) - SelfyzAI, the AI video and image generation platform at selfyz.ai, today announced that its team has completed first-batch internal testing of Kling 4.0, the next-generation video model announced by Kling AI on October, 2026. [SelfyzAI](#) confirmed it will add Kling 4.0 to its workspace model picker as soon as the model becomes publicly available, giving users access to the new model alongside the platform's existing lineup of video generation options.

Kling AI's announcement confirmed that Kling 4.0 is expected this October, with the full model not yet publicly available. During the internal testing phase, the SelfyzAI team has [reviewed Kling 4.0](#), including native 30-second generation per clip, support for up to 10 keyframes, up to 15 multimodal references, up to 4K output with 10-bit HDR, enhanced video editing and continuation, and steadier motion in high-intensity scenes.

"Being part of the first internal testing batch gives us a head start on how [Kling 4.0 compared with 3.0](#) behaves in real creative workflows," said the SelfyzAI team. "Our goal is simple: when Kling 4.0 goes live, our users should be able to select it in the workspace and put it to work immediately, without waiting on a platform integration cycle."

SelfyzAI's workspace currently offers a model picker with 13 video models, including the Kling 3.0 and 3.0 Turbo, Kling 2.6, the Seedance 2.0 family, Veo 3.1, Vidu, Hailuo 2.3, and Minimax H3, alongside image models, on a credits-based system. The company says Kling 4.0 will appear in the picker as a new selectable option once Kling makes the model publicly available, so existing users will not need to change how they create.

The announcement follows SelfyzAI's pattern of adopting new video models quickly after their public

release, giving creators the choice to match each project to the model best suited to it. The company notes that Seedance 2.5, whose model page is already live on selfyz.ai, is also rolling out, underscoring the pace at which new-generation models are arriving this fall, and released a detailed comparison between [Kling 4.0 vs Seedance 2.5](#).

SelfyzAI will share usage notes and recommended settings for Kling 4.0 on its blog once the model launches, including guidance on the new keyframe and multimodal reference features announced by Kling.

About SelfyzAI

SelfyzAI (selfyz.ai) is an AI video and image generation platform that lets creators turn text prompts and reference images into short-form video, imagery, and creative assets. The platform offers a workspace model picker with a broad range of leading video and image models, available on a credits-based system, for creators, marketers, and small teams producing social, commercial, and experimental content.
