

Tarasafe at Expo Protection 2026: FR & Arc Flash Solutions

kolkata, West bengal Oct 29, 2026 ([Issuewire.com](https://www.issuewire.com)) - For businesses sourcing flame-resistant (FR) and Arc Flash protective workwear, finding the right solution starts with understanding the hazards, performance requirements and needs of the workforce. Meeting the manufacturer directly can help buyers explore suitable garment options, clarify technical specifications and make more informed procurement decisions.

At Expo Protection 2026 in Paris, Tarasafe will be available to connect with buyers and industry professionals looking for protective workwear solutions. The event offers an opportunity to discuss workplace requirements, explore relevant garment ranges and understand the product information that can support purchasing decisions.

Why Meet Tarasafe at Expo Protection?

Choosing protective workwear involves more than selecting a garment type. Buyers need to consider the hazards present in their work environment, the protection required, the tasks employees perform and the conditions in which garments will be worn. A direct conversation with the Tarasafe team can help buyers identify the questions to address when assessing suitable options.

Tarasafe brings more than 30 years of experience in fabric development, design, testing and production. At the exhibition, visitors can discuss their requirements and explore product ranges intended for different industrial applications.

Explore FR and Arc Flash Workwear Options

Flame-resistant workwear is designed for environments where workers may face heat and flame

hazards. Arc Flash protective clothing addresses the thermal hazards associated with an electric arc. Since these hazards are different, buyers should assess the workplace risks and select garments against the relevant requirements rather than assuming that one type of protection covers every situation.

Tarasafe's ranges include options such as the ArcLite FR Coverall, Gran FR Shirt and Fresco FR Polo, alongside garment types including coveralls, shirts, trousers, jackets and polos. The appropriate choice depends on the intended application, the hazards identified and the specifications of the individual garment.

Discuss Standards and Product Documentation

For buyers sourcing protective workwear for European markets, compliance and documentation are important parts of the evaluation process. The EU PPE Regulation (EU) 2016/425, CE marking and relevant product documentation should be considered when reviewing PPE. Depending on the garment and its intended use, buyers may need to check the applicable standards and supporting declarations.

For Arc Flash protection, IEC 61482-2 addresses clothing intended to protect against the thermal hazards of an electric arc. It does not mean protection against electric shock. Buyers should review the specific product documentation and confirm that the garment's stated performance is appropriate for the risks identified in their workplace.

Consider the Needs of the Workforce

Protective workwear also needs to be suitable for the people wearing it and the work they perform. Garment fit, mobility, fabric properties, care instructions and laundering requirements can all affect day-to-day use. Buyers can use a meeting with the Tarasafe team to discuss these practical considerations alongside protection requirements and repeat procurement needs.

Meet Tarasafe in Paris

Expo Protection 2026 is an opportunity to discuss FR and Arc Flash protective workwear directly with Tarasafe and explore options for different industrial applications.

Event: Expo Protection 2026
