

The Artificial Organisation Helps Businesses Simplify Operations Through Business Process Automation

The Artificial Organisation's TAO Platform is designed to connect existing business software, workflows and company knowledge in one environment.

Redcar, Cleveland Oct 8, 2026 ([IssueWire.com](https://www.issuewire.com)) - Businesses are increasingly looking for practical ways to reduce repetitive administration and improve the way their teams manage daily operations. The Artificial Organisation, an Australian AI automation company, is helping businesses address these challenges through connected business systems and business process automation.

Many businesses rely on multiple software platforms for accounting, communication, customer management, scheduling and internal tasks. While these tools can be useful individually, disconnected systems can create repetitive data entry, duplicated work and processes that depend heavily on manual follow up.

The Artificial Organisation's TAO Platform is designed to connect existing business software, workflows and company knowledge in one environment. Through business process automation, organisations can create workflows that help move information between systems and automate repetitive operational tasks.

For example, a customer enquiry can trigger a series of actions such as creating a customer record, assigning a task, notifying a team member and scheduling a follow up. This allows employees to spend less time managing routine steps and more time focusing on customers and important business activities.

TAO also includes an AI assistant called Andy, which can support teams with tasks such as drafting emails, identifying work that needs attention and assisting with everyday operational activities. Human approval remains important for actions where judgement or customer interaction is required.

The platform is designed to work with existing business software rather than requiring companies to replace every system they already use. Its integration approach allows businesses to connect applications and build workflows around their existing processes.

The Artificial Organisation works with businesses across areas including construction and trades, professional services, events and hire, health and allied health, real estate and retail.

As businesses continue to adopt AI, practical automation is becoming an important part of improving operational efficiency. The Artificial Organisation aims to make that transition more accessible by combining software integration, workflow automation, company knowledge and AI assistance within one connected platform.

For more information about The Artificial Organisation and its business automation solutions, visit the company's website.
