

YSHUN Ships 70 Modular Buildings to Vietnam for Worker Housing

The September 2026 shipment to Hai Phong highlights YSHUN's modular worker accommodation solutions as Vietnam advances major infrastructure and construction projects.

Huizhou, Guangdong Oct 14, 2026 ([Issuewire.com](https://www.Issuewire.com)) - YSHUN Ships 70 Modular Buildings to Vietnam for Construction Worker Accommodation

Guangdong Yashun Housing Technology Co., Ltd. (YSHUN), a China-based modular building manufacturer, announced that it shipped 70 modular building units to Hai Phong, Vietnam, on September 3, 2026, for construction worker accommodation.

The shipment demonstrates YSHUN's practical project supply experience in the Vietnamese construction market. As Vietnam continues to develop major infrastructure and industrial projects, worker dormitories, project offices, and supporting construction camp facilities remain important components of construction planning.

Providing Modular Worker Accommodation Solutions for Construction Projects in Vietnam

Large construction projects often require centralized worker accommodation, with facilities coordinated according to workforce mobilization, site preparation, and overall construction schedules.

Modular buildings offer a factory-prefabricated, on-site assembly solution for construction worker

camps. Depending on project requirements, these buildings can be used as worker dormitories, project offices, canteens, sanitation facilities, and storage spaces.

For projects in Vietnam, modular building configurations should also consider local climatic conditions, including high temperatures, heavy rainfall, humidity, and strong winds in certain regions. Thermal insulation, waterproofing, ventilation, and structural configurations should be determined according to specific project requirements.

YSHUN Ships 70 Modular Building Units to Hai Phong, Vietnam

On September 3, 2026, YSHUN shipped 70 modular building units to Hai Phong, Vietnam, primarily for construction worker accommodation.

This shipment represents an actual modular building supply project undertaken by YSHUN in the Vietnamese market and demonstrates the company's ability to supply modular building products in quantity for overseas construction projects.

For construction camps of different sizes, building quantities, room layouts, installation arrangements, and supporting facilities can be planned according to the purchaser's specific requirements.

Vietnam's Infrastructure Development Drives Demand for Construction Worker Camps

Vietnam continues to advance major infrastructure projects, industrial parks, and public facilities.

Among these developments, the planned 135,000-seat **VinFast–Trống Đồng Stadium** in Hanoi has attracted industry attention as a major sports infrastructure project.

Large-scale construction projects typically involve substantial numbers of construction workers, management teams, and equipment resources. As a result, appropriate planning for worker accommodation, project offices, centralized dining facilities, and sanitation infrastructure is essential.

Modular buildings can provide temporary or project-specific building spaces for different applications, depending on construction schedules, workforce numbers, and site conditions.

Project Clarification: YSHUN's shipment of 70 modular building units to Hai Phong is an independent project and is not associated with the VinFast–Trống Đồng Stadium development in Hanoi. The stadium project is referenced solely as an example of Vietnam's large-scale infrastructure development and does not imply that YSHUN participated in or supplied the stadium project.

For Vietnamese construction contractors and project procurement teams, modular building solutions can be evaluated based on accommodation capacity, building functions, transportation conditions, on-site installation requirements, and applicable local building regulations.

About YSHUN

Guangdong Yashun Housing Technology Co., Ltd. (YSHUN) is a modular and prefabricated building manufacturer based in **Huizhou, Guangdong Province, China**.

The company operates a **65,000-square-meter manufacturing facility** and supplies modular buildings, prefabricated container houses, and related building solutions for international markets.

YSHUN works with overseas customers to discuss product specifications, material configurations, manufacturing schedules, international transportation, and project-specific technical requirements.

The company continues to develop its ability to adapt building products and technical documentation to the requirements of different international markets, with product configurations and technical solutions evaluated according to individual project conditions.
