Apolosign Portable TV Brings Mobile Entertainment and Everyday Organization Together Through the HomeView Experience

The 32-inch wheeled portable smart TV combines Android apps, a native Family Calendar and a customizable dashboard.

Los Angeles, California Nov 4, 2026 (Issuewire.com) - Apolosign highlights the versatility of its Portable TV through the HomeView household screen experience, bringing together mobile entertainment and everyday family organization. The 32-inch portable smart TV combines an Android operating system, a built-in battery and a wheeled base with a native Family Calendar and customizable dashboard, allowing household members to watch content, use compatible apps and check shared schedules on one movable screen. Available in 1080p and 4K versions, the TV requires no mandatory subscription for its core Family Calendar and dashboard features.

Built around the existing hardware and software capabilities of Apolosign Portable TV, the HomeView experience brings entertainment, Android apps and household information together on a shared display. From watching movies in the living room and playing music in the kitchen to reviewing family schedules at the dining table, users can move the screen and switch functions as their activities change.

The flagship 32-inch 4K model features a high-resolution display, a 15,000mAh built-in battery and a wheeled base. Cord-free operation allows flexible placement in living rooms, kitchens, playrooms and

dining areas, while support for compatible third-party Android apps expands the TV's everyday uses.

"Families use screens for much more than watching shows, and we designed Apolosign Portable TV to fit naturally into those everyday routines," said Fyhack, CEO of Apolosign. "Its wheeled design, built-in battery and Android platform let the same screen move from movie night in the living room to music in the kitchen or a shared calendar at breakfast. The HomeView experience brings those capabilities together, helping families enjoy entertainment and keep everyday information within easy reach."

Wheeled Design Brings Entertainment to More Spaces

Apolosign Portable TV combines a large-screen entertainment experience with mobility. Through supported apps, household members can stream shows, play background music or display photo albums featuring holidays and family milestones.

The wheeled base makes it easy to reposition the screen as activities change, while the built-in battery supports operation without a power cord. Users can roll the TV toward the couch for movie night, move it into the kitchen for music while preparing meals or place it in the dining area for shared viewing.

Both the screen's location and its content can adapt to the household's needs, allowing one device to serve multiple purposes throughout the day.

Android Expands the Possibilities of Portable TV

Running on Android, Apolosign Portable TV supports compatible streaming, productivity and smart home applications. Users can choose apps and content according to their needs, using the large screen for entertainment, information and everyday planning.

At breakfast, the display can show the weather and the day's schedule. During meal preparation, it can provide access to meal plans or play music. In the evening, it can switch to movies, shows or photo displays. These uses come together on the same screen to form the HomeView experience.

Supported voice and smart home controls are available where compatible, depending on service access and configuration. Third-party applications and services may have their own account, connectivity or subscription requirements.

A Native Family Calendar Keeps Shared Plans Visible

Alongside entertainment and Android apps, Apolosign Portable TV includes a native Family Calendar that supports schedule synchronization across multiple household members, bringing individual plans into one consolidated view.

School drop-offs, sports practices, medical appointments and weekend activities can be reviewed on the shared screen, helping family members coordinate their time. Families can check the day's plans over breakfast or review tomorrow's schedule before choosing a show, making calendar access part of their existing routines.

The TV's mobility also gives households flexibility in where they view that information. The screen can move to the dining table for a discussion about upcoming plans or remain in an easily visible location for quick schedule checks.**A Customizable Dashboard Adapts to Household Routines**

The DIY dashboard supports drag-and-drop layouts for calendars, weather, meal plans and supported household widgets, allowing users to organize information around their routines.

Families can make the calendar the main view to highlight upcoming activities or combine weather forecasts, meal plans and reminders on one screen. They can check the weather before heading outside, review a menu while preparing dinner or look ahead to the next day's plans.

The core Family Calendar and customizable dashboard features require no mandatory subscription, giving the TV an ongoing role as a shared household information screen between entertainment sessions.

Key Specifications: Apolosign 32-Inch 4K Portable Smart TV
