Cannon VoIP Releases Version 4: More Than 1,500 Features, One Flat Price, No Contract

Tools businesses usually pay extra for, from call tracking to a full emergency alert system, are now built in

Fort Worth, Texas Nov 22, 2026 (Issuewire.com) - Cannon VoIP today released Version 4 of its cloud business phone platform. It has more than 1,500 built-in features, including more than 30 that none of eight leading national phone providers list among their own features. Many are tools businesses normally buy separately, and they're included in Cannon VoIP's flat monthly price.

"We don't believe in nickel-and-diming our customers," said Brayden Cannon, owner and CEO of Cannon VoIP. "No contracts, one flat rate, and pricing anyone can understand. When we build something new, our customers get it. They don't get a bill for it."

An emergency alert system, included

Schools and businesses often pay a separate safety company thousands of dollars per building every year for a panic button and lockdown system. Version 4 includes one:

- A silent panic button on the app, the web portal and every desk phone.
- Lockdown, evacuate and shelter-in-place alerts that reach everyone at once: lock screens, texts, emails, a phone call that reads the alert aloud, desk phone screens and the overhead speakers.
- Doors that lock automatically in a lockdown, with camera views pulled up for responders.
- "I'm safe" and "I need help" replies, with a live board that shows who needs help first.
- A drill mode, so schools and offices can practice without calling 911.

Bells and announcements, built in

Schools and plants can run their bell schedules and scheduled announcements through the overhead speakers they already have, with no separate bell system to buy.

Call tracking, included
Many businesses pay a separate call tracking service to learn which ads make the phone ring. Version 4 builds it in. Every call is matched to the ad, keyword or search that brought it in, and calls from Google ads are reported back to Google Ads automatically.

Tools that help sales teams close

- **Voicemail drops.** Reps leave a recorded voicemail with one click and move on to the next call.
- **A predictive dialer** that dials ahead, so reps spend their time talking, not waiting on rings.
- **Sentiment analysis** that flags how each call went, so managers know which calls to review.

Protection that runs on its own

- **Fraud auto-pause.** If someone breaks in and starts running up international calls, Version 4 pauses international calling automatically before the bill grows.
- **Caller timeouts** that put repeat nuisance callers on hold so they stop tying up the lines.
- **Automatic backups of every setting,** so a bad change can be undone in seconds.

More of what's new

- **A live interpreter on any call.** Dial *84 and an interpreter joins the call, works out both languages by itself and translates as people speak.
- **Call screening that shows, word for word, who's calling and why** before you answer.
- **An AI receptionist** that holds a real conversation, answers questions and books appointments.
- **Booking pages** that let customers book time from a website or a link, synced with Google Calendar and Outlook, with no separate scheduling service.
- **Wake-up and reminder calls** for hotels and care facilities.

Always adding, never raising the price
Cannon VoIP's goal is to offer every feature published by the major business phone providers in the United States, and the company expects to reach it by summer 2027. New features arrive in customers' service as they're released, at no added cost.

Cannon VoIP backs that goal with its Feature Match Guarantee. If a business used a feature on another phone system that Cannon VoIP doesn't have, the company will build it. If the feature isn't live within eight weeks, the business gets a $200 service credit. Full terms are at cannonvoip.com/feature-guarantee.

Plans start at $34 per user per month, with no long-term contract. Cannon VoIP offers 24/7 support and on-site installation.
