Essence Technologies Launches Test Print Page, a Free Brand-Neutral Printer Test Page Utility

Vilnius, Lithuania Nov 17, 2026 (Issuewire.com**)** - Essence Technologies, an independent web development studio founded in 2019 by Derek Roga, has launched Test Print Page (https://testprintpage.net/), a free online utility that helps home and small-office users diagnose printer problems. It offers five printable test sheets, Quick, Color, Black & White, CMYK and Alignment, as PDFs in A4 and US Letter, matched to symptoms such as faded prints, streaks, wrong colours and

misalignment, with an on-screen reference for comparison when printing at 100 percent or Actual Size. It works with HP, Canon, Epson, Brother and other major brands, and needs no account, no uploads and no installation.

"Most 'broken printer' calls I handled in support work were not hardware faults at all," said Derek Roga, Founder of Essence Technologies. "Test Print Page gives users the same clean diagnostic sheet a technician would print first."

About Essence Technologies: Essence Technologies is an independent web development studio based in Vilnius, Lithuania, founded in 2019 by web developer Derek Roga. The studio builds free, focused web tools, including Test Print Page.
