Grand Mirrors STUDIO Redefines Custom Glass Design With MirrorArt and Illuminated LightWall

Evervue introduces new creative possibilities for residential, hospitality, and commercial interiors through customizable UV-printed mirrors and illuminated architectural glass.

Newport Beach, California Nov 17, 2026 (Issuewire.com) - Grand Mirrors, Evervue's premium custom mirror brand, is expanding the possibilities of architectural glass design through its new **STUDIO MirrorArt and STUDIO LightWall** offerings, combining personalized artwork, advanced UV printing technology, and innovative lighting integration.

Designed for architects, interior designers, hospitality developers, and homeowners seeking distinctive interior features, Grand Mirrors STUDIO transforms conventional mirrors and glass surfaces into customizable design elements that reflect individual creative visions.

With MirrorArt and LightWall, customers can explore new ways to incorporate personalized artwork, decorative patterns, and illuminated glass features into residential and commercial environments.

STUDIO MirrorArt: Where Reflection Meets Artistic Expression

STUDIO MirrorArt brings a creative dimension to traditional mirrors by allowing customized artwork, graphics, textures, and decorative patterns to be printed directly onto reflective glass using UV printing technology.

Rather than relying on conventional mirror designs, customers can personalize their mirrors to complement specific interior themes, architectural finishes, and design preferences.

From decorative bathroom mirrors and statement pieces in luxury residences to artistic installations in hotels, salons, and commercial spaces, MirrorArt combines everyday functionality with personalized visual expression.

Available in custom dimensions, including large single-piece formats up to approximately 6 × 9 feet, MirrorArt also offers optional LED lighting integration to further enhance its visual appeal.

STUDIO LightWall: Bringing Custom Artwork to Light

Complementing MirrorArt, STUDIO LightWall introduces a different approach to architectural decoration by combining UV-printed glass with integrated illumination.

Custom artwork, stone-inspired patterns, geometric designs, and branded graphics can be incorporated into illuminated glass panels, creating distinctive features for reception areas, hospitality interiors, retail spaces, restaurants, and architectural installations.

With customizable dimensions, selected glass configurations, and specialized mounting solutions, LightWall provides additional opportunities for designers to incorporate illuminated decorative surfaces into their projects.

The interaction between printed artwork and lighting creates a visually engaging design feature while allowing customers to personalize the appearance to suit their intended environment.

Bringing Individual Design Concepts to Life

A key advantage of Grand Mirrors STUDIO is its made-to-order approach, providing customers with greater creative freedom beyond standard mirror shapes and decorative glass patterns.

Architects, designers, and property owners can submit their preferred artwork, design concepts, dimensions, and project specifications for evaluation and customization.

Whether creating an artistic bathroom mirror, a distinctive hospitality feature, or an illuminated statement wall, Grand Mirrors STUDIO offers opportunities to integrate personalized design into functional architectural surfaces.

Through MirrorArt and LightWall, Grand Mirrors continues to expand its product offerings beyond conventional illuminated mirrors, bringing together artistic expression, custom glass manufacturing, and lighting technology.
