HYBRIX Introduces a Digital Commerce Ecosystem Connecting Shopping, Loyalty and Blockchain

Malaysian technology company GigaEx Sdn Bhd outlines the HYBRIX vision, bringing together everyday purchases, digital loyalty rewards, blockchain infrastructure and community education.

Petaling Jaya, Selangor Nov 18, 2026 (Issuewire.com) - GigaEx Sdn Bhd, a Malaysian company developing the HYBRIX digital commerce ecosystem, has outlined its approach to connecting everyday shopping with digital loyalty rewards, blockchain technology and community education.

The initiative brings together consumer commerce, merchant participation and digital infrastructure under a shared vision: "Every Cent You Spend, We Value."

Connecting Everyday Commerce With Digital Participation

As digital commerce continues to evolve, businesses are exploring new ways to strengthen customer relationships beyond conventional discounts and promotional campaigns.

HYBRIX is being developed around the idea that eligible purchases can contribute to a broader loyalty experience, allowing consumers to accumulate rewards while participating in a connected commercial community.

Through HYBRIX Supermart, the ecosystem aims to provide a practical starting point for customer engagement and digital reward programmes.

HBXt and HBX: Two Distinct Components

The HYBRIX framework distinguishes between HBXt, an internal loyalty reward point, and HYBRIX Token (HBX), a blockchain-based digital token.

HBXt is intended to support the recording and management of qualifying customer rewards within the ecosystem.

HBX is a BEP-20 token deployed on BNB Smart Chain, with a total supply of 1,000,000,000 tokens.

The relationship between internal rewards and blockchain-based token distribution is governed by programme eligibility, operational readiness and applicable terms.

This distinction is designed to support clearer communication about customer rewards and digital assets.

Supporting Merchants and Community Growth

HYBRIX also envisions opportunities for merchants and community participants to connect through digital commerce.

Its development strategy includes expanding merchant participation, improving access to commerce-related digital tools and supporting customer engagement through a unified ecosystem.

The company intends to pursue these objectives in phases, taking into account operational capacity, technical development and regulatory requirements.

Education as Part of the Ecosystem

Alongside commerce and loyalty, HYBRIX includes a CSR Digital Academy initiative focused on blockchain awareness, digital wallet literacy and responsible participation in the digital economy.

The educational programme is intended to help participants better understand emerging technologies, including the risks associated with digital assets.

HYBRIX Market, a separate digital trading infrastructure initiative, remains subject to phased development, testing and applicable compliance requirements.

A Long-Term Digital Commerce Vision

GigaEx Sdn Bhd sees HYBRIX as a developing ecosystem that can connect consumers, merchants, technology and education through practical digital services.

Its long-term direction is to build participation through real commerce activity while strengthening the infrastructure required for future ecosystem expansion.

The company will continue to communicate project developments, programme terms and relevant milestones through its official channels.

About GigaEx Sdn Bhd and HYBRIX

GigaEx Sdn Bhd is a Malaysian company behind the HYBRIX digital commerce ecosystem. HYBRIX brings together Supermart commerce, HBXt loyalty rewards, the HBX blockchain token, digital infrastructure development and community education.
